monitoring relays

Functions

Motor temperature monitoring with fault latch.

If the supply voltage U is applied (green LED illuminated) and the cumulative resistance of the PTC-circuit is less than $3,6\text{ k}\Omega$ (standard temperature of the motor), the output relay R switches into on-position. Pressing the Test/Reset button under this conditions forces the output relay R to switch into off-position. It remains in state as long as the Test/Reset button is pressed and thus the switching function can be checked in case of fault. The test function is not effective by using an external Reset button. When the cumulative resistance of the PTC-circuit exceeds $3,6\text{ k}\Omega$ (at least one of the PTCs has reached the cut-off temperature), the output relay R switches into off-position (red LED illuminated). The output relay R switches into on-position again (red LED not illuminated), if the cumulative resistance drops below $1,8\text{ k}\Omega$ by cooling down of the PTC and either a Reset button (internal or external) was pressed or the supply voltage was disconnected and re-applied.

Application of built-in Test/Reset button.

Application of an external Reset button.

U - supply voltage; R - output state of the relay;
PTC - state of sensors; **Failure** - fault latch

Mounting, mechanical design

TR2 supply transformers are designed for mounting in MR-G... monitoring relays and they are inseparable for their operation. MR-G... relays will not operate without the TR2... transformers. In order to mount the TR2... transformer in the monitoring relay, it is necessary to remove the protective cap ❶ from the relay, which protects the terminals of TR2... Then, TR2... shall be placed in the assembly opening of the MR-G... relay. The cover of TR2... is made of self-extinguishing plastic. When mounted, the tightness of TR2... is IP 20.
