

RSR92

single-phase solid state relays, industrial

RSR92-..V..

RSR92-..I..

- Single-phase power controller (phase angle load control)
- Control input: DC voltage 0...10 V DC (RSR92-..V..) or current 4...20 mA (RSR92-..I..)
- SCR output (thyristors) • Load current 25...80 A
- Max. load voltage 280, 530 V AC (single-phase)
- Dielectric strength 4 000 Vrms (opto-isolation)
- MOV protection (built-in varistor)
- LED indicator (green) • Screw terminals
- Mounting on panel or on heatsinks
- Recognitions, certifications, directives: RoHS, REACH,

Applications

They are used to regulate the power delivered to the receiver, where this power is proportional to the input control signal. They are used in automation control systems where smooth control of receiver power is required for resistive or resistive-inductive loads. Typical applications for power controllers: heaters, industrial furnaces (annealing, quenching, drying, etc.), dryers, plastics processing equipment, industrial sealing machines, glass production industry, industrial heating systems (matting and lining of pipelines), load transformers.

Basic technical data

Load voltage: 176...280 V AC, 300...530 V AC
Control input: DC voltage 0...10 V DC or current 4...20 mA
Load current: 25 A, 40 A, 60 A, 80 A

Output / proportional control characteristics ❼

❶ Data given for ambient temperature ≤ 25 °C. Above 25 °C the maximum current decreases - see "Thermal derating curves", page 5.

❷ When connection cables to relay: please ensure, screws are torqued down properly.

❸ Relay must be mounted to proper sized heatsink, based on "Thermal derating curves". Between relay and heatsink must be used thermal pad.

❹ The output curves were measured at 50 Hz.

Thermal derating curves

**To select the proper sized heatsink:**

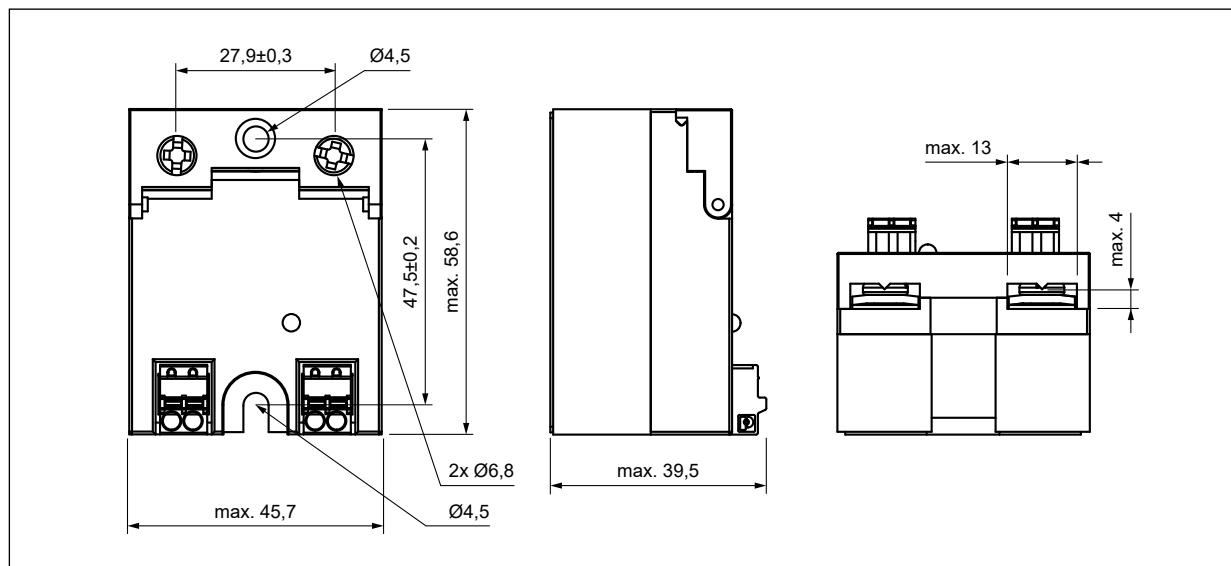

- determine the load current and the maximum ambient temperature the relay will be exposed to,
- use the "Thermal derating curves" (see above).

Example: for a single-phase **RSR92** 25 A, at 16 A load current and ambient temperature at 50 °C:

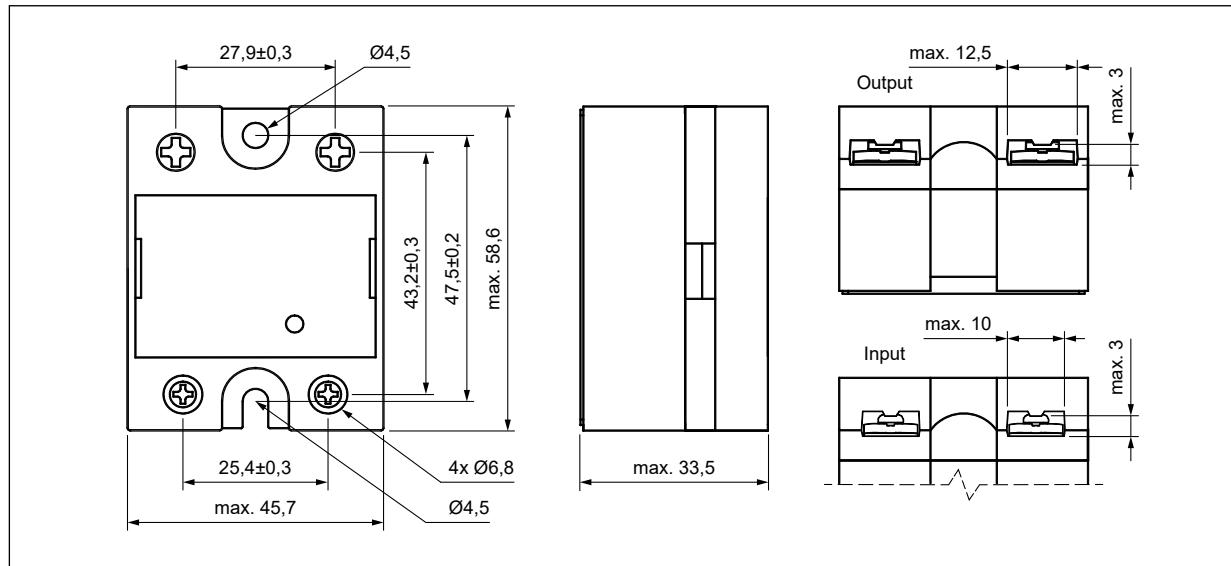

- on the Y axis we find the current value for which we draw a line perpendicular to Y,
- on the X axis we find the ambient temperature for which we draw a line perpendicular to X,
- we determine the intersection of both lines,
- read the heatsink rating – **always choose the rating above your point**: we need a 1,6 °C/W sized heatsink, since the 2,1 °C/W heatsink will not ensure sufficient cooling of the solid state relay.

Connection diagrams**RSR92-..V.. ⑧****RSR92-..I..**

GND: common cathode

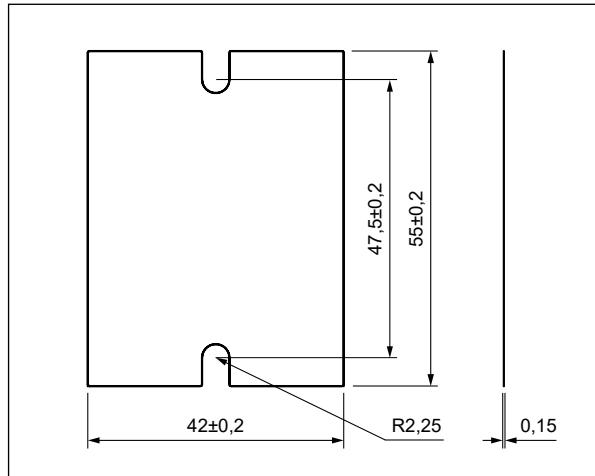

VDD: anode of the power supply

VCON: voltage control input

⑧ The auxiliary power supply GND and the input control GND should be connected internally to the earth ground; if the external control signal and the power supply are not connected together to the earth ground, then both should be connected to each GND respectively.
